PASSING INTO HISTORY -- The world's first nuclear-powered vessel, the
submarine USS Nautilus, departs New London (Connecticut) en route to
California. She was beginning her final cruise after being on active duty
since January 17, 1955. Nautilus broke all previous records for underwater
speed and endurance on her first voyages. In 1958, she became the first craft to sa
to sail under the ice of the North Pole. In the distance can be seen the
Trident-class submarine Michigan under construction. (79-1222)
