

BUSINESSMAN'S JET -- This sleek, futuristic-looking airplane is the prototype of a new corporate jetfan being developed by Beech Aircraft Company of Wichita, Kansas. The Beechcraft Starship 1 will utilize seamless composite construction techniques expected to make it far stronger, faster and more fuel efficient than aircraft made of aluminum. The configuration and airfoil shapes should make it virtually incapable of stalling. It is expected to be available by 1987. (85-1830-C)
