CALIBRATION TESTS FOR TIROS II CAMERAS -- The Tiros II satellite is positioned for calibration tests of its two cameras. The lens of the wide angle camera protrudes from the base plate of the satellite at upper right. Through the opening in the center of the large calibration scale appears a smaller scale for measurements of the narrow angle camera. Tiros II is the second weather observation satellite launched by the U.S. National Aeronautics and Space Administration. (60-20841)
