

U.S. NAVY LAUNCHES 6.4-INCH TEST SPHERE IN VANGUARD SATELLITE PROGRAM

QUINCY MICHAEL — The large steel gantry is moved back from the launcher as the time for firing approaches at Cape Canaveral. Vanguard technicians use the seven-story structure with its self-contained elevator and hoist crane to prepare the rocket during the countdown. There are working platforms at several levels and three sets of arms hold the rocket in the gantry during the assembly. (58-5092)

La gran torre de acero es ~~traída~~ sacada del lanzador cuando se acerca el momento del lanzamiento en Cabo Cañaveral. Los técnicos del Vanguard utilizan la estructura de siete pisos con el ascensor que encierra y eleva la grúa para preparar el cohete. Se trabaja en plataformas a distintos niveles y se sostiene el cohete en la armazón mientras se monta.
