

MARS MOSAIC -- This mosaic of the first three photographs of the planet Mars received from the Mariner 4 spacecraft shows the areas of the Martian surface covered. Photos No. 1 and No. 2 overlap. The first was made with a red filter and the second with a green filter. Mariner project scientists anticipate acquiring additional valuable data through a comparison of the overlap sections. The quadrant marks and the line along the right edge of each picture are associated with the camera system. The dark spot in the lower left quadrant of each picture is an apparent defect in the system and has nothing to do with the Martian surface. (65-2624)
