

BELOW THE RINGS -- The unlit side of the B-ring is captured in this Voyager 2 view taken from 3.4 million kilometers as the American spacecraft was leaving the planet. "Reddening" of the B-ring, also seen in earlier Voyager 1 images, is visible in color renditions. This is one of the first pictures obtained from Voyager 2 after its scan platform was turned back on following instrumentation problems. (81-2119-C)

NOTE: View horizontally with planet at left.
