

CONCERN IN MISSION CONTROL -- Astronauts join the capsule communicators (center) in the Apollo-13 mission control at Houston, Texas as word was received April 13 of an emergency aboard the spacecraft heading toward the Moon. At left are Tom Mattingly (standing), who missed the flight because of a susceptibility to measles, and Donald Slayton, director of flight crew operations. At right is John Young, backup pilot to Apollo-13 commander James Lovell. Fuel cell failures caused a cancellation of the lunar landing and a premature termination of the mission.
