GEMINI FINALE -- The Gemini-12 spacecraft with U.S. astronauts James Lovell and Edwin Aldrin aboard splashes into the Atlantic right on target November 15 at the end of a highly successful orbital flight. The splashdown also marked the successful conclusion of the Gemini Program, which included two unmanned and 10 manned flights. It is to be followed in early 1967 by the first three-man flight in the Apollo Program, one goal of which is to land U.S. astronauts on the Moon before the end of the decade.
