

GEMINI-12 TARGET -- This is the view that Gemini-12 astronauts James Lovell and Edwin Aldrin had as they maneuvered their spacecraft about the Agena target vehicle in orbit. The two craft were later joined together, first by a "docking" collar and later by a 30-meter tether. The four-day flight, which ended with a bullseye landing in the Atlantic on November 15, was the final one in the two-man Gemini program. The first three-man Apollo flight is scheduled for early 1967. (66-3236)
