

GEMINI-6 ROCKET SEPARATION -- This picture from a television screen shows the separation of the first and second stages of the Titan-2 rocket that sent Gemini-6 astronauts Wally Schirra and Tom Stafford into orbit December 15 for their historic rendezvous with the Gemini-7 spacecraft. The second stage starts falling behind at left. The spacecraft was at an altitude of 43 miles (69 kilometers) and had travelled 67 miles (107 kilometers) downrange when this picture was made with a U.S. Air Force camera at Patrick Air Force Base, near the launch site at Cape Kennedy, Florida.
