

MOON VIEW FROM GEMINI-7 -- The full moon hovers over the earth's horizon in this view from the Gemini-7 spacecraft in orbit. The photograph was made with a Hasselblad 70mm camera by Astronaut James Lovell. The nose of the Gemini-7 is at lower left. Lovell and fellow-astronaut Frank Borman flew man's longest mission in space of 14 days. They also participated with Gemini-6 astronauts Wally Schirra and Tom Stafford in man's first rendezvous in space. (65-4426)
