

GEMINI-AGENA DOCKING -- The Gemini-10 spacecraft is joined up with the Agena target vehicle in space. The docking occurred as the two craft orbited earth at an altitude of about 300 kilometers about six hours after the Gemini-10 was launched. After the join-up, the Agena motor was fired to send the docked craft to a new manned altitude record of 760 kilometers above earth. (66-2449)
