

14. Astronaut David R. Scott, Commander of the Apollo 15 mission, adjusts the dish-like antenna that will be used for transmitting high quality color TV pictures from moon to earth. The camera (lower left) is mounted on the Lunar Roving Vehicle and pictures can be transmitted when the astronauts are riding in LRV or turned on by remote control. The Rover with its TV camera turned on will be left on the moon so that viewers on earth can have their first look at a spaceship blasting off from the Lunar Surface. Photo from IPS - B/W 71-1168.
