

CZ056071

SHUTTLE CHORES -- Two crew members perform their tasks aboard the orbiting Discovery. Payload specialist Charles Walter (left) closes a stowage area for biological samples supporting the continuous flow electrophoresis system experiment in the mid-deck area. An engineer with McDonnell Douglas, he is the first employee of a private firm sent into space. He sought to create a new hormone in the gravity-free environment of space. Judith Resnick (right) is surrounded by many of the cameras on board as she peers into the mid-deck area. At top are television and motion picture cameras and at bottom is the IMAX 70mm camera.
