

DEC. 4 1962

NORTH-SOUTH RELAY EQUIPMENT — This complex at the International Telephone and Telegraph Corporation's Federal Laboratories in Nutley, New Jersey will be used in the intercontinental communications tests via the Relay satellite. In foreground are the antenna and support facilities of the northern ground terminal of the North America-South America satellite link. In background are the antenna and control van of the transportable ground station which has since been set up in Brazil as the southern terminal. (62-7227)
