~~SPACE ANTENNAS — The space antennas used in Project Telstar at Goonhilly Downs in England (left), at Pleumeur-Faudou in France (upper right) and at Andover, Maine (lower right) will also be used in the Project Relay communications experiments. (62-7221)~~

SPACE COMMUNICATORS — Brazilian electronics engineers (above) check out the ground communications equipment van for use in Project Relay. The transportable space communications terminal, developed by the International Telephone and Telegraph Corporation in Nutley, New Jersey, will be used as the southern terminal of the United States-Brazil communications network using the Relay satellite. Below is a view of the control center for the station in New Jersey. (62-7221)
