

ASSEMBLED LUNAR PHOTO -- Dr. Lawrence Rowan, project scientist for the Lunar Orbiter program, describes features of the Moon shown in a picture assembled from 87 framelets. The picture was made by the high resolution camera aboard Lunar Orbiter-1 and the framelets were received at the Goldstone Tracking Station in California. The picture covers an area near the Moon's eastern limb, or horizon. It was displayed at a press conference August 19 at the Jet Propulsion Laboratory in Pasadena, California. (66-2365) 100574
