

THIS ELECTION MACHINE RETURNS AN HONEST COUNT:

3. Fixed on racks, the insides of voting machines are assembled at the manufacturers in a long, detailed operation. When a voting machine is completed, it is "rung up" like a cash register, to test its accuracy. The counters can register 999 votes per candidate, but most cities require one machine for each 500 to 600 registered voters. (54-9627)
