

TV VIA TELSTAR — This image of the U.S. flag in front of the radome at the Andover, Maine transmitting station was sent to and received from the Telstar communications satellite during its first day in orbit. The Andover station handled the transmission and reception of the programs, which were beamed during the satellite's sixth and seventh orbit. The programs were seen on television screens across the United States. Stations in England and France also received portions of the first day's transmissions. Telstar was launched from Cape Canaveral, Florida on July 10. (62-3784)
