LUNAR MOSAIC SHOWS SURVEYOR'S SHADOW -- The shadow of Surveyor I on the surface of the moon is prominent in this sperical mosaic of narrow-angle pictures taken by the spacecraft a few hours before the lunar sunset on June 13. Surveyor I sent back to earth 10,338 pictures of the moon during its first 12 days of operation. It was launched May 31 from Cape Kennedy and made a "soft" landing on the lunar surface on June 2.
