CREW QUARTERS -- Heart of the space station is the living modules, to be built by the Boeing Company. Cutaway drawing shows astronauts in various rest and work areas (top center), and at work in the laboratory module (center, below work area). Module for equipment and supplies is at far left and nodes interconnecting the modules, also used for storage, are at both ends of the habitation and laboratory modules. The nodes feature adapters for docking the Space Shuttle orbiters. The laboratories and living quarters are designed with built-in "up-and-down" orientation for the crew. (87-2350-C)
